

Petriss Launches BLUEfin Sterilization Intelligence Software at IAHCSSM

BLUEfin delivers improved patient safety, helps sterilization professionals meet industry best practices, minimizes the stress of training CSP professionals, and enables transparent compliance with mandated sterilization expectations.

ATLANTA – April 29, 2019 – [Petriss](#), the leader in surgical device sterilization intelligence, announced the launch of a revolutionary new software solution that empowers sterilization professionals to pursue compliance expectations set by The Joint Commission, AAMI, AORN and other regulatory organizations.

BLUEfin is a cloud-based advanced sterilization intelligence software solution that provides real-time guidance on cleaning and sterilization instructions to the end user where it is needed most — right at the sink.

Powered by a proprietary database of validated instructions for use (IFU) from medical device manufacturers around the world, BLUEfin helps sterilization professionals combat daily errors and the one-size-fits-most approach to cleaning and sterilizing reusable surgical devices that results in a 70% non-compliance rate, according to [The Joint Commission](#).

BLUEfin empowers hospital and surgical center staff to improve patient care, reduce surgical site infections, lower re-admissions, strengthen staff training and enhance accountability with automated compliance documentation mandated by TJC, AAMI, AORN, CMS, AAAHC and others.

BLUEfin also helps hospital systems reduce legal and financial risk, minimize the potential for citations, and enhance their reputations with industry-leading best practices.

Petriss debuted the BLUEfin sterilization intelligence system at the International Association of Healthcare Central Service Material Management (IAHCSSM) conference in Anaheim, California. A leading hospital system in the Southeastern United States is already using BLUEfin to optimize patient care, improve compliance and pursue best practices for proper sterilization.

ABOUT PETRISS, LLC

Petriss, LLC is the leader in sterilization intelligence solutions that protect the health of patients and staff by combating the daily errors that occur in every hospital system due to complexity, lack of access to manufacturer instructions for use (IFU) and human error. These practices result in a 70% non-compliance rate and expose hospital systems to patient infections, re-admissions, citations, and legal and financial risk. Petriss created the cloud-based BLUEfin sterilization intelligence software solution to provide step-by-step IFU directions from global manufacturers right at the sink where sterilization professionals need it the most. BLUEfin empowers staff to provide better patient care while also strengthening training, documenting compliance and enhancing the reputation of healthcare systems.
